

**Protection of the environment** is our priority. We operate at the highest standards of sustainability.

TunnelPro guarantees a suitable, adequate and effective environmental management system focus on environmental continuous improving performance and sustainability while applying our risk management approach during the entire project.

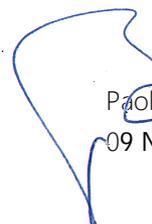

This Policy is a formal management declaration implemented by a management system that complies with the requirements of **ISO 14001**.

Our **environmental commitment** is displayed through:

- Ensuring compliance with legal, contractual and local requirements;
- Providing the financial and infrastructure resources to ensure the effective management of the environmental management system;
- Preventing pollution, working on the direct and indirect impacts that can be controlled and/or influenced by our own operations;
- Mitigating negative impacts on surrounding communities;
- Fully cooperating with local communities and regulatory authorities to ensure information transparency and two-way communication;
- Protecting the local environment, protected areas and endangered species;
- Reducing the consumption of natural resources and raw materials;
- Reducing - and optimising the management of - waste through reuse and recycling;
- Reducing energy consumption and promoting renewable energy while minimising gas emissions;
- Applying the most suitable technical and organisational measures to protect and preserve ecosystems and biodiversity;
- Providing continuous training to embed an environmental culture that prevents potential negative impacts;
- Utilising suitable resources and innovative technologies in our production processes.

This policy is communicated to our employees as part of the mandatory induction process and it is available to all stakeholders via the company's website and the intranet.

It is reviewed annually during the management system reviews to ensure it is consistent with the company's mission and vision.
